

ABSTRACT

5 A mitt grooms and washes a pet such as a dog or cat. The rubber mitt has a built-in reservoir, with discharge ports and massage nibs for efficient pet grooming. Purposeful patterns of densely placed rubber nibs along the longitudinally extending medial area of the palm side engage pet hairs, remove snags and loose hairs, and provide effective massage. The grooming mitt is
10 molded of rubber, and includes a rigid thumb section which provides stability to the mitt, to permit more effective, rapid use and easy discharging of cleaning fluid from the entire surface of the palm side of the mitt.
